April 4, 2013

Several metals commonly used in the electronics industry: gold (Au), tantalum (Ta), tungsten (W) and tin (Sn) have a variety of sources, including what has been termed as a "Conflict Region". The following are statements describing our policy on procurement of metals derived from ore sourced from mines in "Conflict Regions".

- Foresight Finishing LLC will continue to undertake reasonable due diligence within our supply chain to assure that tin (Sn) and gold (AU) is not procured as a "Conflict Metal." A "Conflict Metal" is a metal derived from ore sourced from mines in conflict areas of the Democratic Republic of Congo (DRC), or illegally taxed on trade routes, either of which is controlled by non-government military groups, or unlawful military factions.
- Foresight Finishing LLC is committed to sourcing responsibly and considers mining activities that fuel conflict as unacceptable.
- Foresight Finishing LLC's efforts related to conflict minerals are aligned to the work of the Electronic Industry Citizenship Coalition[®] (EICC[®]) and Global e-Sustainability Initiative (GeSI). The EICC's and GeSI's work includes the Conflict-Free Smelter Program and the Conflict Minerals Reporting Template ("Template").
